Actually, we were wondering what you wanted the home page to be? Did you want the home page to redirect to the login page or go somewhere else?

Subject: Question on UI example UW - Platteville Devops Project

Hello,

We have a quick question on the UI example that you gave us. In the example, there was a home icon, which we assumed to be a button. We were wondering where you would like this home button to redirect to or if it had a different functionality?
